## Summary

AI Engineer with experience in developing AI-powered applications, conversational RAG systems, and full-stack solutions. Skilled in LangChain, Retrieval-Augmented Generation (RAG), FastAPI, React, and Python, with hands-on experience building scalable backend services, local LLM applications, and production-grade AI systems. Passionate about Generative AI, Machine Learning, and Software Engineering.

## Education

**Cochin University College Of Engineering Kuttanadu** — Pullinkunnu, Kerala
*Master of Computer Applications* — *2023 – 2025*

**Fr. Porukkara CMI College Of Advanced Studies** — Alappuzha, Kerala
*Bachelor of Computer Applications* — *2020 – 2023*

**Gregorian Institute Of Technology** — Kottayam, Kerala
*Diploma in Civil Engineering* — *2017 – 2020*

## Experience

**AI Engineer Trainee** — Dec 2025 – March 2026
*KiksAR Technologies Pvt.Ltd.* — *Bengaluru, India*

- Took ownership of 5+ production-grade AI chatbot builds end-to-end, developing and deploying WhatsApp conversational agents across E-commerce and Real Estate using Python and Gemini-2.5-Flash.
- Engineered multi-flow conversational systems — prompt engineering, tool routing, and state management — reducing fallback/escalation rate by approximately 30% for complex natural-language queries.
- Owned the full product lifecycle (requirement gathering, Agile Scrum ceremonies, User Acceptance Testing) in a fast-paced, startup-style environment, coordinating with cross-functional stakeholders.
- Automated bookings, queries, and follow-ups by integrating APIs and Google Sheets, improving reliability of production workflows.

## Projects

**Hybrid Conversational RAG Assistant** — GitHub

- Developed a full-stack conversational AI assistant using FastAPI, React, LangChain (LCEL), and Ollama with Retrieval-Augmented Generation (RAG) for local LLM inference.
- Implemented History-Aware Retrieval with conversational memory to rewrite follow-up queries into standalone retrieval queries.
- Built a Hybrid Search pipeline by combining ChromaDB vector search with BM25 keyword retrieval and improved retrieval quality using Cross Encoder reranking.
- Added source attribution to provide transparent responses grounded in retrieved documents through a modular RAG pipeline.
- **Tech Stack:** Python, FastAPI, LangChain (LCEL), ChromaDB, BM25, Sentence Transformers, Ollama, React

**Advancements in Cricket Shot Detection: Integrating Human Pose Estimation and Deep Learning** — GitHub

- Engineered a full-stack pose-based cricket shot classification system using human pose estimation and deep learning techniques
- Designed and implemented an end-to-end data pipeline for key point extraction, flattening, scaling, normalization, and model training
- Developed RESTful APIs for shot prediction, authentication, and feedback management
- Built a responsive web interface to support real-time shot detection and analysis
- **Tech Stack:** Python, Detectron2, PyTorch, FastAPI, MongoDB, HTML, CSS, JavaScript

## Technical Skills

**Programming Languages**: Python, SQL, JavaScript
**Frontend**: HTML, CSS, React
**GenAI & LLM Systems**: LLMs, LangChain, Retrieval-Augmented Generation (RAG), Ollama, Prompt Engineering.
**ML & Deep Learning**: Scikit-learn, TensorFlow, Keras, PyTorch
**Frameworks and Libraries**: Django, FastAPI, NumPy, pandas
**Databases**: MySQL, MongoDB, ChromaDB
**Developer Tools**: Git, GitHub, VS Code, Jupyter Notebook
